### Stick Shift or Automatic?

#### Please do not Plagiarize!

All essays at ESLBEE.COM are by former students who have given written permission for their work to be posted at ESLBEE.COM.

Many sites, however, copy/paste essays from this site into their sites, which is, in fact, stealing. It is plagiarism, an unethical practice that shows a complete lack of academic integrity.

THIS PAGE (will open in new window) documents the plagiarism of just a few of *many* sites to show how essays from ESLBEE.COM are plagiarized.

Why are stick shift cars so popular anyway? They are more difficult to drive, and you must be skilled to drive them. Why not choose an automatic easy ride, which can turn your driving in to comfort, especially while driving in heavy traffic? If this is what you think, you must read this essay before you make up your mind. The purpose of this essay is to contrast stick shift transmission cars with automatic transmission cars. People who drive stick shift cars know the difference and the advantages of having total control of your car engine; people who drive cars with automatic transmissions do not. *In your essay, state the positives and negatives of each*

Cars with automatic transmissions are a great way to drive around because they do not require much driving skill. People who don't like to drive usually will choose an automatic transmission which is one of the main problems. People who drive cars with automatic transmissions often do not pay as much attention as they should. Cars with automatic transmissions have improved through modern chips that have developed better shifting and response with the driver just pressing on the gas. However, they are not as much fun because they are not as challenging. Race cars, for example, do not use automatic transmissions.

Stick shift cars need skilled driving which has advantages. Cars with Stick shifts are very fuel efficient. Cars with a stick shift will respond better to the driver which makes them safer. People who are used to shifting gears will focus more on their driving making it more efficient and safe. When a driver shifts a gear down to reduce their speed, they are actually saving on brake repairs. Cars with stick shifts have more power, and tend to respond better when you accelerate. Another reason for driving stick shifts is that it is just more fun! Stick shifts will make your driving more interesting. Race drivers use the stick shift to take driving to a higher level for maximum performance.

Your personality will make you decide which is better. Cars are made for driving, and driving must be fun. While driving a car with an automatic transmission will be easier and comfortable, driving a car with a stick shift will make you a better driver with a better performance. Driving an automatic is just a part of driving that corresponds to

Nice way of summarizing points

leading the car. However, driving a stick shift will make the driver control the machine. Always remember to drive safely and buckle up!

*Moral<ending type*
